Introduction

Continuing high rates of divorce and separation mean that a growing number of Canadian children will live in a one-parent family for at least part of their childhood. Our present child support system has not always been able to ensure that these children receive the financial support they deserve from both parents. Child support awards are varied and unpredictable, sometimes inadequate, and too often unpaid.

Recognizing the need for fundamental change, federal, provincial and territorial officials have worked together through the Federal/Provincial/Territorial Family Law Committee (the "Family Law Committee") to develop a co-ordinated approach to child support reforms. In the 1994 budget, the government pledged that it would respond quickly to the Family Law Committee's recommendations on the taxation of child support, levels of child support, and their enforcement. In this budget, the government is fulfilling that pledge, with changes in four key areas.

- First, child support paid under orders or agreements made on or after May 1, 1997 will no longer be taxed as income to the recipient, or be tax deductible for the payer.
- Second, Federal Child Support Guidelines will be introduced to help parents, lawyers and judges set fair and consistent child support awards in divorce cases. The Guidelines take the new tax rules into account.

- Third, the government will introduce a wide range of measures to help enforcement agencies ensure that support is paid in full and on time.
- Fourth, the maximum level of the Working Income Supplement of the Child Tax Benefit will be increased from \$500 per year to \$750 in July 1997 and to \$1,000 in July 1998.

These comprehensive reforms will affect many Canadian parents who receive or pay support for their children. Too often, the child's right to be financially supported by both parents is clouded by the hurt and hostility that follows the breakdown of the parents' relationship. These proposals are designed to make sure that the child's interests come first. Protecting the child's right to an appropriate level of support from parents – paid in full and on time – is at the heart of this package of reforms.

New Rules for the Taxation of Child Support

For the past fifty years, a parent receiving child support has been required to pay income tax on it, and the support-paying parent has been able to claim a tax deduction for the payments. These tax rules have become a focus of public concern in the past few years. Through the consultations of the Family Law Committee, and the Task Group on the Taxation of Child Support, the government has participated in the public discussion of this issue.

It is clear from these consultations that in the minds of most Canadians – including many support-paying parents – these tax rules no longer make sense. Few Canadians think it is right to tax child support as if it is the custodial parent's own income, or to provide a special tax break to the support-paying parent for performing the ordinary obligations of a parent.

Many of those who participated in the consultations stressed that the tax benefit offered by the existing tax rules to some separated parents is not targeted to reach the children who need it most. As well, complex tax calculations make it more difficult for parents to negotiate a realistic level of support that they both see as fair.

Many payers and recipients of child support also complained that the existing tax rules require the payer to make high monthly payments throughout the year in anticipation of a tax refund at year end, while leaving the recipient to worry about how much of the monthly payments should be set aside to cover the tax owing on them.

Participants urged the government to co-ordinate changes to the tax rules with other much-needed reforms. The new tax rules will work in tandem with child support guidelines to ensure that children receive the support they deserve.

New Tax Rules for Child Support

In keeping with the recommendations of the Task Group and the Family Law Committee, child support paid under a written agreement or court order made on or after May 1, 1997 will not be deductible to the payer, or included in the income of the recipient for tax purposes. The new tax rules do not take effect until May 1, 1997 to allow time to enact federal child support guidelines, and to prepare for an expected increase in applications to change existing orders to conform to the new child support rules. The new tax rules will apply to all new orders or agreements made on or after May 1, 1997. Award levels under the new federal child support guidelines are determined on the basis of these new tax rules.

Existing Child Support Orders not Affected Until Varied

The new tax rules do not apply to orders made before May 1, 1997 unless:

- a) a court order or agreement made on or after May 1, 1997 changes the amount of child support payable under an existing agreement or court order;
- b) the agreement or court order specifically provides that the new tax rules will apply to payments made after a specified date (which cannot be earlier than April 30, 1997); or
- c) the payer and the recipient both sign and file a form with Revenue Canada stating that the new tax rules will apply to payments made after a specified date (which cannot be earlier than April 30, 1997). For this purpose, Revenue Canada will provide a form which will be available later this year at all tax services offices.

Once the tax treatment of the child support payments has been changed, parties will not be permitted to return to the old tax rules.

Spousal Support not Affected

The tax changes do not apply to spousal support. Spousal support payments paid on a periodic basis under a written agreement or court order will remain deductible from income by the payer and included in the income of the recipient for income tax purposes.

Distinguishing Between Child and Spousal Support

Currently, courts in some jurisdictions order one amount of support that combines child and spousal support. Courts will be required to distinguish between spousal and child support in orders made on or after May 1, 1997.

Where an amount in a written agreement or court order is not identified as being solely for the support of a spouse, it will be treated as child support for income tax purposes. Similarly, where a written agreement or court order provides that certain expenses are to be paid directly to a third party, any such expense that is not clearly identified as being solely for the benefit of the recipient spouse will be treated as child support.

Also, where the total spousal and child support payments made in a year are less than the total payment required for the year under a written agreement or court order, the payments will first be considered to be child support for income tax purposes.

Impact on Tax Revenues

The current deduction/inclusion tax rules for support payments result in a net loss of tax revenues. The total cost of the current tax rules for federal and provincial governments is estimated at about \$410 million for the 1996-97 fiscal year. The federal portion of this cost is estimated at \$240 million. The new income tax rules for child support will gradually reduce these costs, as more child support orders and agreements fall under the new tax rules. The new tax rules for child support are anticipated to produce revenue gains for the federal government of about \$15 million in the first year, \$65 million in the second year, and \$120 million in the third year.

Because the purpose of these reforms is to help children, the federal government will reinvest its anticipated revenue gains from the new tax rules in measures to benefit children. Specifically, they will fund the implementation costs of the Federal Child Support Guidelines and the new enforcement measures as well as, eventually, help to fund the doubling of the Working Income Supplement (WIS) of the Federal Child Tax Benefit.

Federal Child Support Guidelines

The Family Law Committee found that the current method of determining child support awards is viewed as subjective, arbitrary and unfair. To help parents, lawyers and judges set fair and consistent child support awards, the government will introduce Child Support Guidelines (“the Guidelines”) in the *Divorce Act*. The federal Guidelines will apply when a child support order is made in a divorce proceeding. Although they will not apply in cases of separation or when parents were not married – these situations are governed by provincial or territorial family law – the federal government is working closely with the provinces to encourage them to adopt guidelines in their own jurisdictions. By making the system more predictable and offering a simpler means to update awards, the introduction of guidelines can lower legal costs for parents, as well as legal aid and court costs for governments.

The Guidelines are designed to:

- establish a fair standard of support for children that ensures that children continue to benefit from the financial means of both parents after divorce;
- reduce conflict and tension by making the calculation of child support simpler and more objective;
- improve the efficiency of the legal process by giving courts and parties guidance in setting awards and encouraging settlement; and
- assure more consistent treatment of support-paying parents, while providing sufficient flexibility to ensure that awards are fair in individual family circumstances.

Federal Child Support Guidelines

The Federal Child Support Guidelines are a modified version of the model developed by the Family Law Committee. The Guidelines have three main elements:

- Child Support Payment Schedules;
- rules to adjust the award to reflect four types of special child-related expenses; and
- rules to adjust the award in cases of undue hardship.

Presumptive Application of the Guidelines

Courts will be required to award the amount set out in the Child Support Payment Schedule, plus allowable special expenses, unless the court makes a written finding that the award causes undue hardship to either parent or to the child.

The Guidelines will not be mandatory for support awards that are negotiated out-of-court. However, they will provide guidance to parents as well as the courts – which are responsible for assessing whether reasonable arrangements have been made for the children’s support.

Child Support Payment Schedules

The Child Support Payment Schedules show the basic amount that the support-paying parent should pay according to his or her income and the number of children. “Income” will be defined broadly in the Guidelines, but the income of a new partner or spouse will be relevant only if the court is asked to make a determination of undue hardship.

The Schedule amounts are fixed by a formula that calculates the appropriate amount of support in light of economic data on average expenditures on children across different income levels. The formula reserves a basic amount of income for the payer’s self-support, and adjusts for the impact of federal and provincial income taxes. There are separate tables for each province to take differences in provincial income tax rates into account. The Schedules for each province and territory are included in the Annex.

A New Approach to Setting Child Support

Guidelines which – like the Federal Child Support Guidelines – set support payments as a share of the support-paying parent's income are known as percentage-of-income guidelines. This style of guideline is used in many American states and in New Zealand. They are premised on a number of findings from economic research on the costs of raising children:

- spending on children is not fixed but changes as the income of either parent changes;
- the amount a family spends on their children is directly related to the means of both parents;
- spending on children increases as the number of children increases, but the incremental costs associated with each additional child are lower, as the family benefits from economies of scale;
- there is little regional variation in the proportion of family income devoted to children;
- the child will live at the same standard of living as the custodial parent because they live in the same household;
- because spending on children is not fixed, but varies with both parents' incomes, the contribution of the support-paying parent can be set independently of the income of the custodial parent. This allows the child to benefit from increases in the custodial parent's standard of living, and recognizes that the support-paying parent will not have a greater capacity to pay support if the custodial parent suffers a drop in income;
- the custodial parent will also contribute to the children in relation to his or her own means. The custodial parent is expected to contribute an amount similar to what a support-paying parent with a similar income would be required to pay.

This new approach to setting child support payments improves upon the existing system in three fundamental ways:

Awards Will be Based on Average Expenditures on Children

Because of the difficulties involved in calculating the *specific* costs of raising a child, the Guidelines are based on studies of *average* costs of raising children. Applying these Guidelines will result in more consistent child support awards across similar income levels and will ensure that more children will receive adequate amounts of child support.

Awards Will Recognize that Expenditures Vary With Income

The amounts set out in the Schedules are based on economic studies which show that spending on children is not fixed, but is directly related to the income level of both parents and to the number of children in the family. Families spend more on their children as family income increases, and spending on children changes with the income of either parent. As well, while overall spending on children increases with the number of children, incremental expenses for additional children are not as high because the family benefits from economies of scale.

Children Will Benefit From the Means of Both Parents

Under the Guidelines, the parents' financial obligations toward the child are treated independently. The support-paying parent's contribution is set according to his or her own income, without reference to the income of the custodial parent. The Schedule awards reflect the amount that a parent with a particular level of income is expected, on average, to spend on his or her children. The custodial parent is expected to contribute a similar share of his or her income to meet the costs of raising the child. In this way, the children will share in increases or decreases in either parent's income, just as they would if the two parents had continued to live together.

Adjustments to the Guideline Amount

Child support guidelines need to have a degree of flexibility, because not all children or families are alike. The federal Guidelines are designed to strike a balance between the need for more consistent and predictable awards, and the need to ensure that awards are equitable in individual situations. Support awards can be adjusted in two ways to recognize individual family circumstances.

Special Child-Related Expenses

While the Child Support Payment Schedules reflect average expenditures on children, some kinds of expenses for children do not lend themselves to averages. To ensure that support awards are equitable when there are extraordinary expenses for a child, four categories

of special child-related expenses can be added to the Schedule amount if they are reasonable and necessary in light of the needs of the children and the means of the parents:

- **net child care expenses** for children who are not in full-time school, or for whom extraordinary arrangements are required;
- **medical and health-related expenses** over \$200 per year per child that are not covered by provincial or territorial health insurance plans;
- **educational expenses** for primary, secondary or post-secondary education, or for an educational program that meets a child's particular needs; and
- **extraordinary expenses for extracurricular activities** that allow a child to pursue a special interest or talent, or attend a specialized program.

When appropriate, the support-paying parent's contribution to these special expenses will be added to the Schedule amount.

Undue Hardship

A court will be able to award more or less than the Schedule amount plus allowable special expenses if this total amount causes "undue hardship" to either parent or to the child. The party pleading undue hardship will usually have to show that he or she has a lower standard of living than the other party. The situations which might justify a finding of undue hardship are not limited, but could include:

- an unusually high level of debt, reasonably incurred to support the family or earn a living;
- significant access expenses, such as travel or accommodation costs; and
- obligations for the support of other children, or spousal support obligations.

To help ensure consistency, the court will be required to give written reasons for ordering child support that is more or less than the amount set out in the Guidelines.

Adjustments for Special Custody Arrangements

The Guidelines will provide a method for adjusting the support amount in cases of split custody (when each parent has custody of one or more children of the marriage) and shared custody (when parents share custody of the child fully and equally).

Application to Existing Child Support Orders

The new Child Support Guidelines will apply to new orders for child support made under the *Divorce Act*, and orders that change existing child support orders, made after the date that the Guidelines come into force.

This means that the new Guidelines and income tax rules for child support will not automatically affect the operation of existing child support orders. If neither parent seeks a change to their existing support order, then the order will not be affected by either the Guidelines or the tax change. However, either parent will be able to apply to a court to have their child support award varied to reflect the Guidelines and the new tax rules.

Funding to the Provinces to Facilitate Variations

The Family Law Committee recognized that the introduction of child support guidelines, combined with new income tax rules for child support, would trigger an increased number of applications for variations of child support orders. The Committee stressed the importance of improving existing systems of court administration and developing new administrative mechanisms at the provincial level to help the courts cope with these applications. Streamlined systems to reassess support awards will make it easier for support-paying parents to keep support obligations in line with changes in their income.

■ Accordingly, the federal government will establish a \$50 million fund that will be used, in partnership with provincial governments, to develop, pilot and implement innovative, efficient, and cost-effective administrative mechanisms to assist parents to obtain, vary, and update support awards. The details of the partnership funding will be decided after discussions with provincial counterparts.

Four-Year Review of Guidelines

For four years, the Family Law Committee researched the issue of child support, debated the appropriate type of guidelines for Canadian society, and developed its model and recommendations. Since the Committee's report was released, legal organizations, women's groups, father's groups, individual lawyers, academics and members of the judiciary have commented on the recommendations. These proposals for comprehensive reforms reflect the refinements made as a result of the consultation process.

The Guidelines will redefine the way child support awards are determined. To ensure that the Guidelines operate as fairly and effectively as possible, it is important to carefully review their impact. Justice Canada will monitor and evaluate their operation over the first four years after they come into force. All of those who will use the guidelines – parents, mediators, lawyers and judges – will be asked to provide input. Research will be conducted on the impact of the Guidelines. Experience with the Guidelines will provide guidance as to how to further refine them.

The results of the evaluation will be submitted to Parliament to ensure that the results will be available to those responsible for the legislation and also to the public.

Advisory Committee

Justice Canada will establish an Advisory Committee to assist it with the implementation of the Guidelines, and to recommend changes that will make the family law system work more efficiently.

More Effective Enforcement of Child Support

Children will only benefit from fairer child support awards if they are paid in full and on time. Support collection and enforcement is primarily the responsibility of provincial and territorial enforcement agencies, and many of the effective tools are only at their disposal. However, the federal government has supported their work with funding to establish and improve enforcement programs, and by helping agencies trace support payers and garnisheeing federal payments that are due to defaulting payers.

The budget proposes wide-ranging actions at the federal level to help provincial and territorial enforcement agencies ensure that family support obligations are respected.

Dealing With Chronic Default

Most parents are responsible and caring. Many pay support for their children on time and without fail. Some miss payments because of misfortune, such as job loss. However, there are some who persistently refuse to pay. Canadian society can no longer tolerate the view that child support is a bargaining chip, or a discretionary expense.

Three new measures will directly address the problem of chronic default:

- a new federal licence suspension initiative;
- extended tracing of defaulters; and
- expanded powers to use federal pensions to satisfy support arrears.

Federal Licence Suspension Initiative

Special tools of persuasion are needed for support payers who persistently breach their support obligations. A new Federal Licence Suspension Initiative responds to that need. At the request of a provincial or territorial enforcement agency, the federal government will suspend specified licenses, privileges, and certificates issued to a support payer who has failed to meet his or her support obligations for three consecutive months or has accumulated arrears of \$3,000. Licence suspension will be a measure of last resort when other enforcement actions have not succeeded. The enforcement agency will notify the support defaulter of its intention to request suspension of federal licences, so that the defaulter has the opportunity to avoid the licence suspension by making arrangements for payment with the enforcement agency.

Initially, the measure will apply to passports and specific federal aviation and marine licences and certificates. The government will continue to examine other federally issued licences and certificates for possible inclusion in the program.

Extended Searches to Trace Defaulters

The federal government already helps provincial and territorial enforcement agencies locate defaulting payers by screening specified federal data banks for current residential or employer addresses for individuals that are in arrears of their support obligations.

- To improve the accuracy of this service, Revenue Canada will be added to the list of federal departments whose data banks can be searched at the request of provincial enforcement agencies, for information about residential addresses, and names and addresses of employers for the purposes of locating persons who have breached family support orders. The confidentiality of the

information provided by Revenue Canada will be safeguarded to ensure that the information is used solely for the purposes of locating support defaulters and securing support payments.

Broader Powers for Diversion of Federal Pensions

Federal pensions can currently be used to satisfy support arrears, but certain technical rules have impeded the use of these powers in some cases.

■ Federal legislation will be amended to allow pension diversion in a wider range of cases and maximize the pension benefits that can be applied toward support obligations.

Feasibility Study of “New Hires” Program

Several American states collect information from employers on new employees so that support enforcement agencies can locate and begin collecting support arrears from defaulting payers as early as possible. Recent U.S. federal legislation requires all state agencies to have such “New Hires” or “Employer Reporting” programs in place and to report new and re-hire information to a national-level registry.

■ The Government of Canada will conduct a feasibility study to examine the costs, advantages, and disadvantages of various options for a national system for reporting of new employees and re-hires in Canada to assist enforcement agencies.

Strengthening Support Enforcement Programs

Many seemingly small and incremental changes can have an impact on the problem of support default. For example, proposed changes to the *Bankruptcy Act* will give priority to claims for unpaid family support in the bankruptcy process. This budget includes a package of further measures to strengthen federal enforcement services and support provincial and territorial efforts to make their enforcement programs more effective.

Changing Attitudes

Chronic default often reflects unacceptable attitudes toward support obligations – seeing them, for example, as a bargaining chip between embittered ex-spouses. However, Canadians are increasingly intolerant of this kind of thinking and the behavior that goes with it – behaviour that hurts the welfare of children, custodial parents, and society as a whole.

■ The federal government will therefore fund a national public awareness campaign to support changing societal attitudes toward support obligations. The federal government will work with provincial and territorial enforcement agencies to produce a co-ordinated campaign that is both national in scope and sensitive to regional concerns.

Financial Assistance for More Rigorous Enforcement

In the past few years, several provinces have adopted more aggressive mechanisms of support collection, such as wage-withholding and suspension of provincially issued licenses. We wholeheartedly endorse this policy direction and encourage other provinces to follow.

■ The federal government will contribute up to \$13.7 million over five years to joint federal/provincial/territorial projects that encourage:

- expanded use of innovative techniques for enforcement;
- more rigorous enforcement programs; and
- streamlined collection of out-of-province orders.

Better Co-ordination of Federal Support Enforcement Activities

A new position of Federal Support Enforcement Director will be established within the Department of Justice to co-ordinate enforcement activities at the federal level and work with the provinces and territories to improve the effectiveness and efficiency of enforcement services.

Technological Upgrading of Federal and Provincial Enforcement Programs

- The federal government will provide funds to set up on-line computer access between federal, provincial and territorial enforcement services. This will facilitate:
 - accelerated processing of garnishment and tracing applications; and
 - more timely and standardized collection from out-of-province payers.
- The federal computer system used to search federal data banks for information to help locate support defaulters will be upgraded to accelerate the processing of applications and increase the flexibility and scope of searches.

Streamlined Procedures to Garnish Federal Payments

- The federal government garnishees about \$53 million each year from income tax refunds, unemployment insurance payments, and other federal payments due to support defaulters. The salaries and pensions of federal employees can also be garnished for this purpose.
- Procedures will be streamlined to enhance the effectiveness of these services.

Targeting New Enforcement Mechanisms

At present, it is not possible to determine national rates of compliance and default on support orders because provincial and territorial enforcement agencies do not use a standardized method to analyze and present data. There has also been very little work to determine the causes of support default. Better information would help target more effective mechanisms for support enforcement.

- **Developing a Statistical Database:** The Canadian Centre for Justice Statistics (CCJS) will be provided with funding for an annual national survey on support compliance and enforcement. Information compiled from the automated systems of the provincial/territorial support enforcement programs will be analyzed, and reported annually. This data will provide the basis for further research.

- **Support to Program and Policy Development:** Justice Canada will study the nature and extent of compliance and default of support orders in Canada and test linkages between support compliance and custody and access issues.

Ongoing Review

These new measures will, together, have a cumulative impact on the problem of support enforcement. The government will continue to review federal legislation and policies to look for new ways to reinforce the message that support obligations must be respected.

Doubling the Maximum Working Income Supplement

Since Family Allowances were first introduced in 1945, Canada has recognized that families with children have special responsibilities which warrant support from governments. This year, the federal government will provide over \$5 billion in assistance to over three million families through Child Tax Benefit payments. Child Tax Benefit payments are tax-free, income-tested and paid on a monthly basis.

■ Maximum payments go to families with net incomes under \$25,921 and include a basic benefit of \$1,020 per child, an additional \$75 for the third and each subsequent child in the family, an additional supplement of \$213 for each child under age seven when no child care expenses are claimed, and finally a Working Income Supplement (WIS) of up to \$500 for low-income working families.

The government understands the difficulty that working parents with low incomes face in raising a family. It is also committed to using anticipated revenue gains from the new tax rules for child support for the benefit of children. Therefore, as part of this package of child-centered measures, the government will double the maximum annual WIS to \$1,000. Because of the importance we attach to improving the living standards of children in lower-income families, we are introducing this measure at this time – by reallocating funds from other government spending – even though revenue gains from the new tax rules will not be realized for some time. This measure will enhance support given to low-income working families and help working parents offset a greater portion of the extra costs of working.

Chart 1

Child Tax Benefit (CTB) with doubled Working Income Supplement (WIS) for a family with one child over age six

benefits in dollars

Source: Human Resources Development

- Eligibility for the WIS will remain the same. Families will continue to receive WIS benefits when earnings reach \$3,750, with these benefits terminating once a family's net income level reaches \$25,921. The other components of the Child Tax Benefit will remain unchanged.

Table 1

Enriched benefits for families with children

Family net income ¹	Proposed Working Income Supplement (as of July 1998)	Proposed total Child Tax Benefit ² (including WIS)	Increase in benefits
(dollars)			
3,000	0	1,020	0
5,000	200	1,220	100
10,000	1,000	2,020	500
15,000	1,000	2,020	500
20,000	1,000	2,020	500
25,000	184	1,204	92
30,000	0	918	0

¹ Assuming net income is composed entirely of earnings.

² For a family with one child over age six.

- Over 700,000 working families will benefit from the increased WIS. The average benefit they receive will increase from \$350 a year to \$700. About 250,000 families will receive the maximum increase of \$500.
- When fully implemented in July 1998, benefits to low-income working families will be enriched by \$250 million annually.
- About one-third of the families that will benefit from the increased WIS are one-parent families.

The increase in the WIS will be phased-in over two years. The maximum benefit will increase from \$500 to \$750 effective July 1, 1997, and from \$750 to \$1,000 in July 1998.

Doubling the WIS was first proposed in the federal Discussion Paper, *Improving Social Security in Canada* and was subsequently recommended by the Standing Committee on Human Resources Development when it reported on social security reform.

This proposal reflects the government's clear commitment to assist low-income working families to meet the added costs they face when combining employment outside of the home with the important job of raising their children.

Conclusion

The new child support rules described in this document are designed to protect the rights of children. These comprehensive changes will simplify the tax rules for child support, establish fair and consistent levels for child support awards, offer new mechanisms to ensure that support is paid, and provide increased assistance to low-income working families. At the heart of all these measures is the government's commitment to ensuring that Canadian children whose parents separate or divorce will receive the financial support they deserve.
